

PROCESS FOR PRODUCING SANDED ELASTIC FABRICS,
AND FABRICS MADE THEREFROM

Abstract of the Disclosure

5 A process for making sanded elastic fabrics having low fuzz is
described. The process involves sanding an elastic fabric with a
microfinishing film to achieve a fabric having good side-center-side
consistency, and a thick, consistent nap produced from a large
number of short hairs. The fabrics can be produced at greater
10 efficiency than achieved from conventional sanding methods, and
with an enhanced aesthetic appearance.
